

SPRINT 1 RETROSPECTIVE MEETING MINUTES

DATE:

Nov 02, 2024

START TIME:

10:00 PM

END TIME:

10:45 PM

MEETING PLATFORM:

Google Meet

ATTENDEES: Sanzida(IA), Umma Sumaiya Jahan(UJ), Rubayed All Islam(RAI), Saba(FR), Sathi(AA)

MEETING CHAIR AND NOTE_TAKER: Jannati Tajrimin Mitu(TM)

SPRINT 1 EVALUATION IN RETROSPECT

- What went well?
- What went wrong?
- How can we improve?
- What have we learnt?

WHAT WENT WELL	WHAT WENT WRONG	HOW TO IMPROVE	FEATURES
Upload Files: Upload Files went well and completed successfully	Problems faced regarding upload files format	Will recheck and correct the formats	Store various important information about the intended users and syllabus and routine

WHAT WENT WELL	WHAT WENT WRONG	HOW TO IMPROVE
Assign Course Teacher: Assigned Course Teacher by clicking on update button to each of the course in an Exam Year. Also assigned course teacher by uploading a CSV file.	Problem faced while updating Exam Committee Member to each of the exam year.	May be mapping problem. Further improvement may solve the problem.
View Class Routine: View Class Routine on clicking the search button went smoothly.	Problem fetched for fetching Class Routine data from Database.	Further recheck and Improvements may solve the problem.

WHAT WENT WELL	WHAT WENT WRONG	HOW TO IMPROVE
Generate Routine: Dynamic Slot Creation with Lunch Breaks: Database-Driven Scheduling Parameters: Routine algorithm accurately retrieved teacher availability, assigned courses, preferred days/times, room categories, and room requirements from the database for generating routine. Lunch Break Conflict Avoidance: Slots were allocated to avoid overlaps during lunch hours, ensuring a smooth schedule without interruptions. Course-Specific Slot Distribution (Lab/Theory): Slots were reserved based on course type, with lab sessions receiving double slots as needed Room Specific Course Distributions Course Distributions according to counts per week	Routine Start Delayed by One Slot: Scheduling started one slot later than the user-defined time. Underutilization of Slots and Rooms: To avoid conflicts, some slots and rooms remained unused. Failed JSON Parsing for Complex Test Cases: Test cases with arrays of objects in JSON weren't read correctly. Further improvement of test cases	Start Routine Exactly at User-Specified Time: Adjust the logic to ensure scheduling begins precisely at the start time given by the user. Improve Slot and Room Utilization: Refine the allocation approach to make better use of available slots and rooms while avoiding conflicts. Enhance JSON Parsing for Complex Structures: Strengthen JSON parsing to handle arrays of objects, ensuring all test cases load correctly. Implement Real-Time Conflict Checks: Add validation to detect and resolve conflicts during scheduling

View Personalized Dashboard:

Made Dashboard for all the users of the system (Teacher, Student, Staff, SuperUser)

Doesn't automatically logout after some inactive days..(exp: 10 days)

Further recheck and Improvements may solve the problem.

View Class Representative Information:

View CR's details such as Name, contact Info. (email, phone no.) clicking on the CR's Dashboard.

Problem fetched for fetching or Updating Class Representative data from Database.

Further recheck and Improvements have solved the problem

What have we learnt?

- We have acquired proficiency in using GitHub, managing commits via the terminal, crafting informative commit messages, and harnessing GitHub's wiki and documentation features extensively.
- Our familiarity with Trello has empowered us to efficiently track progress and manage routines.
- We've explored documentation tools like Sphinx, JavaDoc, and JSDoc, and upon conducting comparative analysis, decided that Sphinx works the best for our project.
- Through meticulous work, we've created comprehensive Software Requirements Specifications (SRS), established robust coding standards, and compiled detailed Test-Driven Development (TDD) reports.
- We have taken a deep dive into testing frameworks such as unittest and pytest, and finally decided that unittest works the best for us ensuring the quality and reliability of our code.
- Our commitment to clear and concise communication is reflected in our proficient use of Discord channels to discuss and thus solve all kinds of problems we have faced during sprint 1.
